

aquatherm launches complete pipe series at MagiCAD Cloud

Aquatherm, the global partner brand of Al Sahoo for the last few decades distributes the best quality Plastic piping systems made up of Polypropylene (PPR) in GCC regions.

Gerhard Rosenberg discovered that polypropylene (PP-R) was an ideal material for in-floor radiant heating tubing and started manufacturing the PPR pipe, known as aquatherm, in his garage in Attendorn, Germany.

Today, aquatherm well set their position in the industry as an introducer of innovative piping technologies into the piping world, where megatrends such as digitalization, climate change, sustainability, and aging infrastructure are continuously changing our world. PPR piping systems' cost remains stable while the metal price increases day by day. A huge advantage of the PPR pipe system is its 100% corrosion resistance, which can be highly beneficial in many applications including heating systems and air conditioning.

The engineers, consultants, and the designers are widely recommending aquatherm piping systems for their MEP projects mainly the designers are at the primary level of our project partners. In order to initiate an effortless project flow aquatherm has launched new pipe series at MagiCAD to support designers even better.

Anastasios Barbas
Chief Product Officer
aquatherm

"With our range of plastic piping systems made of polypropylene, we cover numerous application areas in plant construction and building services. By depositing our pipe series in MagiCAD, we offer planners a significant simplification of work and support them in their project activities."MagiCAD 2022 introduced new extensive functionalities for the MEP designs. For the Revit environment, they have introduced pre-configured pipe and drainage series.

The pipe and drainage series now includes a set of fittings that are automatically compatible with the selected piping and drainage. This feature makes selecting piping products much faster and easier.
